Match the corresponding climate classifications to the biome classifications (Some will overlap.)

Climate Classification	Vegetative Biome (Ecosystem)

Which vegetation zones correlate to the highest population density?

Which vegetation zones correlate to the lowest population density?

Can you locate any areas that show high human population density in areas of low vegetation and dry or cold climate? List them.

Why do you think these areas form an exception to the global trend?

How have humans overcome the climate conditions to live closely packed in such regions? Which of these areas have major rivers?
